Deficits in EU and US Mandatory Environmental Information Disclosure May 05 2020 It is the publicity about the Pollutant Release Inventory's data which creates an incentive for firms to achieve emission reductions. Accordingly, public access to environmental information constitutes a core characteristic of the aforementioned inventory. Here, in essence, two facets arise. First, with regard to the collection, it is disputed whether such information, which may comprise confidential commercial and industrial information in the EU as well as trade secrets in the US, can be protected under fundamental and constitutional property rights respectively. Second, in the context of dissemination and utilisation, it is arguable whether the information indeed impacts polluters and produces an outcome that secures a certain level of environmental protection. The author responds to the first issue by taking the EU and US jurisdictions into account and strives to analyse how this novel form of Internet

disclosure liberates market mechanisms in the quest for effective and efficient emission reductions.

Role Differentiation in Chinese Higher Education Oct 22 2021 This book examines tensions between the Chinese state and Chinese universities. It looks at the state's demand for political socialization as a restriction on university autonomy and the university's promotion of academic development through promoting academic freedom and fostering critical thinkers, using Jour University in PRC, as a case study. The book focuses on the dynamics and complexity of the interplay between the state, universities, faculty, staff and students in the process of socialization through political education and academic affairs. Theories on political socialization and higher education guide this study. As universities' socio-political task of imbuing students with a certain type of ideology coexists with their role of promoting university

autonomy, examining China's higher education system provides important insights as different players' interaction. These present a dynamic picture of role differentiation as a strategy to cope with a politically restricted autonomy, which challenges some common stereotypes that have been put on Chinese universities within the global community.

### **Controlled Document Authoring in a**

**Machine Translation Age** Feb 23 2022 This book explains the concept, framework, implementation, and evaluation of controlled document authoring in this age of translation technologies. Machine translation (MT) is routinely used in many situations, by companies, governments, and individuals. Despite recent advances, MT tools are still known to be imperfect, sometimes producing critical errors. To enhance the performance of MT, researchers and language practitioners have developed controlled languages that impose restrictions on the form or length of the source-language text. However, a fundamental, persisting problem is that both current MT systems and controlled languages deal only with the sentence as the unit of processing. To be effective, controlled languages must be contextualised at the document level, consequently enabling MT to generate outputs appropriate for their functional

context within the target document. With a specific focus on Japanese municipal documents, this book establishes a framework for controlled document authoring by integrating various research strands including document formalisation, controlled language, and terminology management. It then presents the development and evaluation of an authoring support system, MuTUAL, that is designed to help non-professional writers create well-organised documents that are both readable and translatable. The book provides useful insights for researchers and practitioners interested in translation technology, technical writing, and natural language processing applications.

**Volatile States in International Politics** Sep 01 2022 An in-depth account of why countries' treacherous foreign policies often have harmless origins, how this predicament shapes international politics, and what to do about it. The increasing unpredictability of state behavior in recent world politics is a surprising development. The uncertainty that results intensifies conflict and stymies trust. In *Volatile States in International Politics*, Eleonora Mattiacci offers the first account of this issue that investigates which states have been volatile and why. Leveraging statistical techniques and archival data in a probing analysis of rivals and allies since the end of World War II, she rejects attempts at dismissing volatility as reflecting mercurial leaders or intractable issues. Instead, Mattiacci explains that a state acts in a volatile manner when its clashing domestic interests leverage power to achieve their goals on the international arena. In demonstrating states'

potential for volatile behaviors, she asks us to reconsider how much we really know about change and instability in international politics. When properly understood, she shows, volatile behavior can become less confusing for observers and potentially less dangerous. This book offers novel, evidence-based tools to cope with volatility in the global arena.

**The Right to Be Counted** Jul 07 2020 In the last 30 years, Delhi, the capital of India, has displaced over 1.5 million poor people. Resettlement and welfare services are available—but exclusively so, as the city deems much of the population ineligible for civic benefits. *The Right to Be Counted* examines how Delhi's urban poor, in an effort to gain visibility from the local state, incrementally stake their claims to a house and life in the city. Contributing to debates about the contradictions of state governmentality and the citizenship projects of the poor in Delhi, this book explores social suffering, logistics, and the logic of

political mobilizations that emanate from processes of displacement and resettlement. Sanjeev Routray draws upon fieldwork conducted in various low-income neighborhoods throughout the 2010s to describe the process of claims-making as an attempt by the political community of the poor to assert its existence and numerical strength, and demonstrates how this struggle to be counted constitutes the systematic, protracted, and incremental political process by which the poor claim their substantive entitlements and become entrenched in the city. Analyzing various social, political, and economic relationships, as well as kinship networks and solidarity linkages across the political and social spectrum, this book traces the ways the poor work to gain a foothold in Delhi and establish agency for themselves.

*Taliban Narratives* Apr 03 2020 Why has the Taliban been so much more effective in presenting messages that resonate with the Afghan population than the United States, the

Afghan government and their allies? This book, based on years of field research and the assessment of hundreds of original source materials, examines the information operations and related narratives of Afghan insurgents, especially the Afghan Taliban, and investigates how the Taliban has won the information war. Taliban messaging, wrapped in the narrative of jihad, is both to the point and in tune with its target audiences. On the other hand, the United States and its Kabul allies committed a basic messaging blunder, failing to present narratives that spoke to or, often, were even understood by their target audiences. Thomas Johnson systematically explains why the United States lost this "battle of the story" in Afghanistan, and argues that this defeat may have cost the US the entire war, despite its conventional and technological superiority.

*Student Movements in Late Neoliberalism* Apr 15 2021 This book inquires into the global wave of student mobilizations that have arisen in the aftermath of the economic crisis of 2008, accounting for their historical and sociological significance. More specifically, its eleven chapters explore the role of students as political actors: their ability to build effective

organizations, to make political alliances with other actors, and to win public consensus, as well as their impact on cultural, political, and policy outcomes. To do so, the volume examines case studies in England, Chile, South Africa, Quebec, and Hong Kong, covering Europe, Africa, Asia, and North and Latin America. Grouped into two major sections, the collection covers the organizational structures of student movements and their alliances and outcomes. Ultimately, this volume examines the understudied political aspects of student unrest, exploring how student mobilizations—driven by indebtedness, precariousness, the corporatization of the university, and other issues—correspond to larger processes of change with wider implications in society.

**What Happened to Equality?** Jul 31 2022 In *What Happened to Equality? **The Arctic in International Law and Policy** Jun 29 2022 The Arctic is an increasingly important region faced with major challenges caused not only by the effects of climate change, but also by a growing interest in its living and non-living resources, its attraction as a new destination for tourism, and as a route for

navigation. It is not only the eight Arctic States that have paid an increased level of attention to the region; several non-Arctic actors from Asia and Europe also seek to gain more influence in the High North. At the same time, the evolving law and policy architecture for the Arctic region has recently played a more prominent role in the political and academic debate. Unlike Antarctica, where the coherent Antarctic Treaty System governs international cooperation, the legal regime of Arctic affairs is based on public international law, domestic law, and 'soft law'. These three pillars intersect and interact making Arctic governance multi-faceted and highly complex. This book provides an analytical introduction, a chronology of legally relevant events, and a selection of essential materials covering a wide range of issues-eg delineation and delimitation of maritime boundaries, environmental protection, indigenous peoples' rights, shipping, and fisheries. Included are multilateral and bilateral treaties, UN

documents, official statements, informal instruments, domestic laws, and diplomatic correspondence.

[The European Union Since 1945](#) Dec 24 2021  
The European Union faces a crossroads in the twenty-first century. While there is evidence of declining enthusiasm for European integration, the EU plays an increasingly vital role in tackling problems that can no longer be dealt with at member state level. In recent years, the EU has developed a stronger foreign, security and defence policy, and has had to face up to the challenges of tackling organised crime, human trafficking and drug smuggling. In this fully updated new edition, Alasdair Blair examines the economic, political, social and personal factors that have shaped the process of European integration from the end of the Second World War until the Lisbon Treaty in 2009. Written in a clear and jargon-free style, the book explores: The context of European integration and expansion The relations between the European

Union and its member states The institutional evolution of the European Union Methods of decision-making Key policies of the European Union The future direction of the European Union Comprehensive and accessible, this book is an essential guide to understanding the relevance of the European Union in the twenty-first century.

*The History and Archaeology of Jaffa* 1 Jul 19 2021 Recipient of the G. Ernest Wright Award for Best Archaeological Publication, American Schools of Oriental Research, 2011 In 2007 the Jaffa Cultural Heritage Project (JCHP) was established as a joint research endeavor of the Israel Antiquities Authority and the Cotsen Institute of Archaeology at the University of California, Los Angeles. Among the project's diverse aims is the publication of numerous excavations conducted in Jaffa since 1948 under the auspices of various governmental and

research institutions such as the Israel Department of Antiquities and Museums and its successor, the Israel Antiquities Authority, as well as the Jaffa Cultural Heritage Project. This, the first volume in the Jaffa Cultural Heritage Project series, lays the groundwork for this initiative. Part I provides the historical, economic, and legal context for the JCHP's development, while outlining its objectives and the unique opportunities that Jaffa offers researchers. The history of Jaffa and its region, and the major episodes of cultural change that affected the site and region are explored through a series of articles in Part II, including an illustrated discussion of historical maps of Jaffa from the nineteenth and early twentieth centuries. Recent archaeological discoveries from Jaffa are included in Part III, while Part IV provides a first glimpse of the JCHP's efforts to publish the Jacob Kaplan and Haya Ritter-Kaplan legacy from Jaffa. Together the twenty-five contributions to this work constitute the first

major book-length publication to address the archaeology of Jaffa in more than sixty years since excavations were initiated at the site. *Building Enterprise Systems with ODP* Sep 08 2020 The Reference Model of Open Distributed Processing (RM-ODP) is an international standard that provides a solid basis for describing and building widely distributed systems and applications in a systematic way. It stresses the need to build these systems with evolution in mind by identifying the concerns of major stakeholders and then expressing the design as a series of linked viewpoints. Although RM-ODP has been a standard for more than ten

years, many practitioners are still unaware of it. Building Enterprise Systems with ODP: An Introduction to Open Distributed Processing offers a gentle pathway to the essential ideas that constitute ODP and shows how these ideas can be applied when designing and building challenging systems. It provides an accessible introduction to the design principles for software engineers and enterprise architects. The book also explains the benefits of using viewpoints to produce simpler and more flexible designs and how ODP can be applied to service engineering, open enterprise, and cloud computing. The authors include guidelines for using the Unified Modeling Language™ (UML) notation and for

structuring and writing system specifications. They elucidate how this fits into the model-driven engineering tool chain via approaches, such as Model-Driven Architecture® (MDA). They also demonstrate the power of RM-ODP for the design and organization of complex distributed IT systems in e-government, e-health, and energy and transportation industries. All concepts and ideas in the book are illustrated through a single running example that describes the IT support needed by a medium-sized company as it grows and develops.
